SEAT GENUINE SILENCERS

Controlled gases output

TECHNOLOGY TO ENJOY

DID YOU KNOW?

The most important tasks of the exhaust system are noise reduction, clear evacuation of hot exhaust gases, and cleaning of the gases according to the legal threshold values.

Without sound dampening, each of the combustion phases would sound just like a tyre bursting.

In a petrol engine at service temperature, the exhaust gases temperature reaches 800°C or more. They are cooled in the exhaust system in such a way that they reach the outside at a maximum 300°C.

Suspension point must be firm enough to hold the exhaust system, but also elastic enough to dampen the vibrations.

Wrong attachments or badly set attachments can cause damage to the system and to the vehicle underfloor zone. An exhaust system not only needs to be especially adapted to every car but also to every engine variant. When repairing, only a part which is compatible with the system can restore full functionality of the exhaust system.

End tip silencers are also design elements for some vehicle models such as the Ibiza Bocanegra. They add that special character and touch to the car.

SEAT GENUINE SILENCERS

They are specially adapted to each vehicle model and engine variant.

They are manufactured using long lasting and high quality materials with optimum material thickness. Their design provides excellent corrosion protection, e.g.: integrated condensation suction, as well as the materials used, e.g.: stainless steel. They are low weight and optimize the vehicle consumption values.

They dampen the exhaust noise above the legal requirements as a result increase driving comfort, guaranteeing full engine power delivery.

They are attached by using automatic adjustment suspensions that react to the exhaust system's expansion from temperature.

Their adjusting is extremely precise, which makes repair fast and not costly.

ADVANTAGES

/ Special harmonizing with the SEAT models and engines.

/ Long lasting and high quality materials.

/ Highly resistant against corrosion.

/ Excellent dampening properties.

/ Optimum assist to engine power delivery.

SEAT GENUINE PARTS

/ The same quality as the parts used in manufacturing the vehicle.

/ They contribute to all the vehicle parts adapting perfectly with each other, therefore rendering utmost safety, reliability and performance.
